What's New

The latest features and improvements in TenderFlow

MAY 2026

FEATURE

v1.76

13 May 2026

Automatic AI analysis when you track a tender

TenderFlow now runs the AI tender analysis for you in the background the moment you accept an opportunity. When the results are ready, a green notification appears at the top of every page with a one-click link to view the analysis on the tender. The notification stays put until you dismiss it or click through, so you won't miss it if you've navigated elsewhere. Counts towards your plan's monthly AI usage; auto-skipped (with no notification) once you reach your limit.

IMPROVEMENT

v1.75

13 May 2026

Clearer upload affordance in the file manager

the file area now shows a hint reminding you that you can drag files in from your computer, or click the upload button above.

FIX

v1.75

13 May 2026

Close buttons in the file manager

the "Close" button on the New Folder, New Web Shortcut and Rename dialogs now actually dismisses the dialog.

FIX

v1.75

13 May 2026

Uploading larger tender documents

the server now accepts files up to 100 MB, so scanned tender packs and bid documents that previously failed with an "upload size" error go through cleanly.

FIX

v1.73

12 May 2026

Plan upgrade modal

clicking "Change Plan" on the Manage Subscription page no longer crashes silently on iPhone (and other devices) when a plan's price is missing or stored unusually. The modal now opens reliably so you can complete the upgrade.

FIX

v1.74

12 May 2026

Login, signup and other forms no longer freeze silently

if browser-verification fails to load (ad blocker, strict privacy mode, flaky mobile network), the form now shows a clear message instead of leaving the button apparently dead. The new "Email me a sign-in link" option also gives you a way in when verification can't load at all.

FEATURE

v1.74

12 May 2026

Email me a sign-in link

on the Sign In page you can now request a one-time sign-in link by email. The link is valid for 15 minutes and only needs to be clicked, so you can get into your account even if your password isn't to hand or your browser is blocking the usual sign-in check.

IMPROVEMENT

v1.70

10 May 2026

Bouncing email address

if our messages start failing to reach you, we'll show a banner so you know, and ask you to confirm a new email address before any account-critical actions (so you never miss a tender alert because of a typo or an old inbox).

IMPROVEMENT

v1.71

10 May 2026

Renew Subscription button for lapsed accounts

if your previous subscription was cancelled and you return to the Subscription page, you now see a clear "Renew Subscription" option (alongside "View Plans") so you can pick up your previous plan in one click instead of being treated as a brand new signup.

FIX

v1.71

10 May 2026

Resubscribing after a cancelled subscription

picking a plan again no longer silently re-starts a fresh free trial. If you've subscribed to TenderFlow before, your card is now charged immediately at the plan's normal price when you come back, exactly as you'd expect.

FIX v1.72

10 May 2026

Payment receipts

after a successful payment you now receive a properly formatted email with your tax-invoice PDF attached, instead of the previous one-line stub message. Pending invoices no longer trigger a confusing "find attached" email before payment has actually settled.

FIX v1.66

3 May 2026

Account administrators were unable to save their company profile, manage users, or manage registrations and projects from the account settings

saving any of these now works as expected.

FIX v1.67

3 May 2026

Saving the Company Profile

Entity Type, Industry, Primary Province, Registration Year, services description, compliance details, B-BBEE details, capacity details and the billing address now actually persist when you click Save. Previously the page reported success but discarded every field, so changes were lost the moment you reloaded.

FIX v1.68

3 May 2026

Saving the Company Profile no longer crashes when an optional field is left blank

Registration Year, B-BBEE Level, ownership percentages, contract value, contract sizes, B-BBEE expiry and the yes/no toggles now store as "not set" instead of being rejected with a database error.

FIX v1.69

3 May 2026

Adding a new certification or past project to your Company Profile no longer fails with an internal error

saving works the first time, instead of crashing on the initial create.

FIX v1.63

1 May 2026

Post-activation login

logging in straight after clicking your activation email now lands you on your dashboard, instead of looping back to the activation confirmation page.

FIX v1.63

1 May 2026

Activation links

clicking an old activation link after requesting a password reset (or an already-used link) now shows a clear "This link is no longer valid" message with Login and Forgotten Password options, instead of a broken page.

FIX v1.64

1 May 2026

Tender edit screen on mobile

the title, Delete/Save buttons, tab strip and Tender Preparation Guide header now lay out cleanly on narrow screens. The title no longer wraps one word per line, the action buttons drop to their own row, the tab strip scrolls horizontally instead of clipping, and the prep-guide deadline/progress badges sit on a row below the title.

IMPROVEMENT v1.64

1 May 2026

Opportunities filters on mobile

the Filter Opportunities panel now collapses to a single tap-to-open bar, with a badge showing how many filters are currently set, so the opportunity list is reachable without scrolling past a screen of filter controls. Tap the bar to open the filters, change them, and tap again to close.

FIX v1.64

1 May 2026

Tender detail title on mobile

long tender titles in the page hero now use a smaller, more readable font on phones so they don't push the rest of the page far down the screen.

FIX v1.64

1 May 2026

Tender detail sidebar on mobile

long category labels in the Industry Classification block no longer overflow off the right edge; the label now wraps onto multiple lines so the full classification is visible.

FIX v1.64

1 May 2026

Opportunity cards on mobile

the action buttons (View Details, Quick View, Accept, Reject) no longer get cut off on narrow screens; they now wrap onto two rows and fill the card width so every button is fully visible and tappable.

FIX v1.65

1 May 2026

Opportunity links

opening an opportunity from a shared link or email (a URL with `?uuid=...`) no longer shows "Opportunity not found"; the dialog now loads the opportunity directly by its UUID instead of trying to find it by searching the list.

APRIL 2026

IMPROVEMENT v1.62

30 Apr 2026

Accepting an opportunity

the extra "Are you sure?" pop-up has been removed. Click Accept on an opportunity and it lands in your tender pipeline immediately.

FEATURE v1.62

30 Apr 2026

Email verification

Tender document downloads now require a verified email address, and a banner at the top of every page lets you resend the verification email with one click. If your address stays unverified for more than seven days, daily tender alerts pause and resume automatically the moment you verify. Existing accounts get a fresh seven-day window starting from this update.

FEATURE v1.60

29 Apr 2026

Popular tenders at a glance

opportunity cards and detail pages now show how many people have viewed a tender once it crosses 10 views, so you can spot which ones are getting attention from other businesses. Repeat opens by the same person within a day are only counted once, and search-engine bots are excluded so the number reflects genuine interest.

FIX v1.61

29 Apr 2026

Occasional "500 server error" after we ship updates

if your browser session was open when we deployed new functionality, some pages could fail to load until you signed out or your session expired. Sessions now refresh their internal cache automatically on every release, so you won't see these errors again.

IMPROVEMENT v1.59

28 Apr 2026

Cleaner first-visit dashboard

if you haven't tracked any tenders yet, the empty stats and empty charts are hidden so the matching opportunities and your readiness score lead the page. Once you start tracking tenders, all the usual analytics return automatically.

IMPROVEMENT v1.59

28 Apr 2026

Tracking a suggested tender from the dashboard

the extra "Are you sure?" pop-up has been removed. Click Track this tender and it lands in your pipeline immediately, with a "Tracked! Open in your pipeline" toast so you can jump straight to it.

IMPROVEMENT v1.59

28 Apr 2026

First visit to Opportunities

the page now opens pre-filtered to the categories and province you picked at signup, so your very first list is already scoped to work you actually do. A "Show all opportunities" button is right there if you want the full list.

FIX v1.58

22 Apr 2026

Daily opportunity alert emails

subscribers using the "Send a separate email per category" option sometimes didn't receive their alerts because of an error while grouping opportunities. Emails now go out reliably.

FIX v1.57

21 Apr 2026

Forgotten password

the "Forgot your password?" link sometimes returned an error for users trying to reset their password. The flow now works reliably from every sign-in and user-exists screen.

FIX v1.54

20 Apr 2026

Cancel Subscription

clicking Cancel on the Manage Subscription page no longer shows a generic error in edge cases where the subscription reference is missing; you'll get a clear message and can retry after refreshing.

FEATURE v1.55

20 Apr 2026

Promo codes on checkout

you can now create discount codes (percentage or fixed amount, optional expiry, usage limit, and plan scope) and customers can enter them in the plan-change modal to see the discounted price before confirming. Discounts flow through to the recurring Paystack subscription so the customer is charged the reduced amount every cycle.

IMPROVEMENT v1.56

20 Apr 2026

Promo codes at signup

new customers can now enter a promo code on the sign-up page (alongside email, company, password) and see the discounted first-charge amount inline before creating their account. The discount carries into the Paystack subscription that's created when their trial converts.

FEATURE v1.48

19 Apr 2026

Analyze with AI right after tracking

The confirmation page you land on after tracking a tender from your daily email now offers AI analysis as an immediate next step, deep-linked straight to the panel.

FEATURE v1.48

19 Apr 2026

AI analysis now lives on the tender itself

Every tender sourced from an Opportunity gets a new AI Analysis panel on its edit page with a one-click **Analyze with AI** button, a live "N left this month" quota badge, and inline results (requirements, mandatory documents, service categories, next actions, risk flags). Any analysis you ran from the Opportunities feed before tracking carries over automatically.

FIX v1.49

19 Apr 2026

Stay signed in longer

login sessions now last 5 hours of inactivity instead of 2, and match the server's cleanup window so you no longer get unexpectedly logged out mid-session.

IMPROVEMENT v1.48

19 Apr 2026

Your AI analysis quota is visible where you need it

The Analyze button shows how many analyses you have left this month, and re-analyzing the same tender (or opportunity) is free thanks to caching.

FEATURE v1.47

19 Apr 2026

Automatic deadline reminder emails

for every tender you're assigned to, we now send a reminder 7, 3 and 1 day before the closing date, plus a separate alert the day before a compulsory briefing. Each email shows what's still outstanding and lands you straight on the tender detail page when you click through — no login prompt. You can opt out of just these reminders from the link in any of them without affecting your other emails.

FEATURE v1.53

19 Apr 2026

New guides hub at /lms/

canonical explainers for B-BBEE, CIDB grades, the SA procurement process, VAT on tenders, how to structure a tender response, and working-day timelines. Each page links through to the relevant calculator.

FEATURE v1.53

19 Apr 2026

Quick-answer pages at /q/

short, specific answers to common South African tender questions (how many B-BBEE points a tender awards, what CIDB grade you need for a R5m project, and more). Each answer links to the fuller guide and the related calculator.

FEATURE v1.53

19 Apr 2026

Compare pages at /compare/

side-by-side reference for TenderFlow vs. manual tracking and TenderFlow vs. the CSD/eTender portals.

IMPROVEMENT v1.53

19 Apr 2026

Blog posts and quick-answer pages now auto-link canonical terms (B-BBEE, CIDB, SBD forms, working days, CSD) to their topic page, so readers can jump straight to the relevant guide.

days, C&D, to their topic page, so readers can jump straight to the relevant guide.

FEATURE v1.52

19 Apr 2026

New "Live data" page at /data/

a single snapshot of current active tenders, categories tracked, provinces covered, and institutions on file. Useful for sharing a quick answer to "how big is TenderFlow's feed?"

FEATURE v1.52

19 Apr 2026

Plain-text versions of the free tools and guides

each calculator, the FAQ, pricing, and how-it-works now have a companion /<slug>.md view that strips chrome for easier copying into notes or AI assistants.

FEATURE v1.51

19 Apr 2026

Company Readiness Score on your dashboard

see at a glance how tender-ready your profile is (0–100%) based on your compliance fields, B-BBEE, capacity, certifications, past projects, CVs, reference letters, and company documents. Click **"See what's next"** to expand a checklist of exactly what's missing.

FEATURE v1.45

19 Apr 2026

One-click tender tracking from your daily opportunity email

Each tender in the daily email now has a **"Track this tender"** and **"Not relevant"** button. Clicking Track adds the tender to your pipeline and logs you straight in so you can open it right away. Clicking Not relevant records your preference so we can deprioritise similar ones. Links stay valid for 72 hours; clicking the same link twice (from two devices, a forwarded email, or a refresh) is safe — you'll land on the same confirmation page, no duplicate tenders.

FEATURE v1.51

19 Apr 2026

Milestone congratulation emails

when your readiness score crosses 50%, 75%, or 90% we'll send a one-time note celebrating the step up and pointing you to what's next.

IMPROVEMENT v1.50

19 Apr 2026

Daily opportunity emails now lead with your best matches

every tender in the email gets a one-line AI explanation of why it fits your profile, the list is re-ordered with the strongest matches at the top, and tenders you've already marked **"Not relevant"** are filtered out.
